Gameplay Design Document

Version 0.1

1. CORE GAMEPLAY PHILOSOPHY

The game is NOT:

- an action RPG;
- an MMORPG;
- a hack-and-slash game;
- a visual novel.

The game is:

A Living Narrative RPG

The player interacts with:

- the world;
- AI characters;
- events;
- consequences.

The player's choices define the story.

2. GAMEPLAY LOOP

Main gameplay cycle:

Travel ↓ Encounter ↓ Dialogue / Combat / Exploration ↓ Consequence ↓ Reward / Loss ↓ Character Growth ↓ Travel

3. PLAYER VIEW

The game has two primary views:

Global World Map

Used for:

- traveling;
 - exploration;
 - discovering locations;
 - random encounters.
-

Event Scene

Used for:

- dialogue;
- combat;
- interaction;
- story events.

The player does not freely walk inside scenes.

The player experiences events directly.

4. GLOBAL MAP

The player controls:

- destination;
- route;
- pace.

The character automatically travels.

Examples:

Travel to:

- village;
- mine;

- ruins;
 - castle;
 - forest;
 - dungeon.
-

5. TRAVEL SPEED

Travel speed depends on:

- equipment weight;
 - weather;
 - injuries;
 - terrain;
 - mounts;
 - fatigue.
-

6. RANDOM EVENTS

During travel, random checks occur.

Possible events:

- bandits;
 - monsters;
 - merchants;
 - travelers;
 - accidents;
 - ruins;
 - weather events;
 - faction patrols;
 - supernatural encounters.
-

7. EVENT SCENES

When an event occurs:

Global Map ↓ Scene Generation ↓ Player Interaction ↓ Result ↓ Return to Map

Examples:

- wolf attack;
 - robbery;
 - dialogue;
 - investigation;
 - treasure discovery.
-

8. PLAYER INPUT SYSTEM

The player never selects predefined dialogue options.

The player always types intentions.

Example:

"I slowly draw my sword."

"I try to negotiate."

"I hide behind the cart."

"I attack his left arm."

"I attempt to escape."

9. PLAYER INTENT SYSTEM

The system processes:

Player Text ↓ Intent Parser ↓ Action Classification ↓ Rule Validation ↓ Game Logic ↓ Dice Roll ↓ AI Narration

10. IMPOSSIBLE ACTIONS

Players can attempt anything.

Examples:

"I fly."

"I cast fireball."

"I strike his eye."

The system checks:

- equipment;
- skills;
- training;
- physical possibility.

The player is never shown:

ERROR: ACTION NOT AVAILABLE.

Instead, AI explains failure naturally.

11. CHARACTER PROGRESSION

The player does not gain abilities automatically.

Abilities are unlocked through:

- teachers;
 - practice;
 - experience;
 - discoveries.
-

12. EXPERIENCE SYSTEM

The player gains:

Learning Points (LP)

Sources:

- quests;
- discoveries;
- combat;
- survival;
- training.

LP are spent with teachers.

13. TEACHERS

Teachers unlock abilities.

Examples:

Sword Master:

- sword techniques.

Hunter:

- bows.

Mage:

- magic.

Blacksmith:

- crafting.

Thief:

- stealth.
-

14. SKILL LEVELS

Skill progression:

Untrained ↓ Novice ↓ Student ↓ Experienced ↓ Master ↓ Legend

Players see words, not numbers.

15. COMBAT ACCESS

Examples:

Sword Skill:

Untrained:

- cannot fight effectively.

Novice:

- torso attacks.

Student:

- arm attacks.

Experienced:

- leg attacks.

Master:

- head attacks.

Legend:

- advanced techniques.
-

16. REPUTATION

Every action affects reputation.

Examples:

- murder;
- theft;
- helping;
- lying;
- trading;
- training.

Reputation is:

- local;
 - faction-based;
 - personal.
-

17. NPC MEMORY

NPCs remember:

- conversations;
- promises;
- crimes;
- gifts;
- fights;
- favors;
- insults.

NPC memory can persist for years.

18. INFORMATION SYSTEM

Players discover information through:

- rumors;
- books;
- observation;
- conversations;
- exploration.

No quest markers.

No teacher icons.

No glowing objectives.

19. QUEST SYSTEM

Quests are not traditional.

Instead:

NPC Goal ↓ NPC Problem ↓ Player Interaction ↓ Dynamic Quest

Examples:

"Find my son."

"Deliver supplies."

"Kill the beast."

"Spy on someone."

20. FAILURE SYSTEM

Failure is not game over.

Failure creates consequences.

Examples:

Failed persuasion:

- combat.

Failed theft:

- prison.

Failed combat:

- injury.

Failed quest:

- reputation loss.
-

21. INJURY SYSTEM

Body parts can be injured.

Examples:

Head:

- confusion.

Arm:

- weaker attacks.

Leg:

- slower movement.

Torso:

- bleeding.
-

22. DEATH SYSTEM

Death is permanent for NPCs.

Player death consequences depend on:

- location;
- enemy;
- circumstances.

Possible outcomes:

- rescue;
 - robbery;
 - imprisonment;
 - injury;
 - death.
-

23. SAVE SYSTEM

There is no manual save philosophy.

The game automatically saves after:

- dialogue;
 - combat;
 - travel;
 - training;
 - quests;
 - trading.
-

24. PLAYER FREEDOM

The player may attempt:

- persuasion;
- intimidation;
- lying;
- theft;
- murder;
- escape;
- diplomacy;
- investigation;
- sabotage;
- bribery.

The game never asks:

"What option do you choose?"

Instead it asks:

"What do you do?"

25. CORE DESIGN RULE

Player imagination should always be larger than the interface.

The interface exists to support imagination, not to limit it.
