

AI-DND

PROJECT VISION DOCUMENT

Version 0.1

Status: Approved Foundation

1. PROJECT OVERVIEW

Working Title

AI-DND

Genre

Single-player RPG with AI-driven NPCs.

The game combines:

- dark fantasy atmosphere;
 - tabletop D20 mechanics;
 - dynamic AI characters;
 - world exploration;
 - text-based interaction;
 - tactical combat.
-

Core Inspiration

The project takes inspiration from:

- Gothic
- Dungeons & Dragons
- Battle Brothers
- Darkest Dungeon
- Kingdom Come: Deliverance

The goal is NOT to copy these games, but to reproduce their strongest emotional experiences.

2. GAME PHILOSOPHY

The player is NOT:

- the chosen one;
- a hero;
- a savior;
- a legendary warrior.

The player begins as an ordinary person.

The world does not revolve around the player.

Respect, power, influence and knowledge must be earned.

3. MAIN FEATURE OF THE GAME

The primary feature of the game is NOT graphics.

The primary feature is:

Living AI Characters

Every NPC:

- has memory;
 - has personality;
 - has goals;
 - has fears;
 - has relationships;
 - remembers conversations;
 - reacts to player actions;
 - exists independently from the player.
-

4. PLAYER INTERACTION SYSTEM

There are NO dialogue buttons.

The player always enters free text.

Example:

"I slowly draw my sword."

"I try to convince the guard."

"I offer the merchant a better deal."

"I attack his left arm."

The player describes intentions.

The game engine determines:

- what the player is trying to do;
- whether the player can do it;
- the probability of success;
- the result.

The AI then narrates the outcome.

5. GOLDEN RULE OF THE PROJECT

The player describes intentions.

The game engine calculates results.

The AI describes consequences.

Formula:

Player Intent ↓ Intent Parser ↓ Rule Validator ↓ Game Engine ↓ Dice Roll System ↓ AI Narrator ↓ Player Response

6. WORLD STRUCTURE

The game world consists of:

- one continent;
- multiple regions;
- settlements;
- roads;
- wilderness;
- ruins;

- dungeons;
- hidden locations.

The world exists independently from the player.

7. GAMEPLAY LOOP

Travel ↓ Random Event ↓ Dialogue / Exploration / Combat ↓ Reward / Consequence ↓ Character Development ↓ Travel

8. COMBAT PHILOSOPHY

Combat is:

- dangerous;
- tactical;
- slow;
- meaningful.

Combat is NOT:

- arcade;
- action-based;
- fast-paced.

The player fights through decisions.

9. D20 SYSTEM

Every important action uses dice.

Examples:

- persuasion;
- intimidation;
- attacks;
- defense;
- stealth;
- lockpicking;
- magic;
- crafting;

- investigation.

The player may not always see the dice rolls.

10. BODY PART TARGETING

Characters can attack body parts.

Possible targets:

- head;
- torso;
- left arm;
- right arm;
- left leg;
- right leg.

However, body targeting depends on training.

Example:

Novice:

- torso only.

Student:

- torso;
- arms.

Experienced:

- torso;
- arms;
- legs.

Master:

- all body parts.
-

11. TRAINING SYSTEM

Characters do not gain abilities automatically.

Abilities are learned from teachers.

Examples:

- one-handed swords;
- two-handed swords;
- axes;
- maces;
- daggers;
- bows;
- crossbows;
- magic schools.

Without training, advanced techniques are impossible.

12. WEAPON TYPES

Every weapon has damage categories.

Examples:

- slashing;
- piercing;
- crushing;
- fire;
- frost;
- poison;
- holy;
- shadow.

Armor protects differently against each type.

13. WORLD LORE PRINCIPLES

The world must feel:

- ancient;
- dangerous;
- mysterious;
- believable.

There are no purely good factions.

There are no purely evil factions.

Everyone believes they are right.

14. PLAYER KNOWLEDGE

The player does not receive information through UI markers.

Information is acquired through:

- rumors;
- observation;
- dialogue;
- exploration;
- books;
- experience.

Example:

The player discovers teachers by speaking to people.

15. AI NPC RULES

AI NPCs:

- cannot break lore;
 - cannot invent impossible facts;
 - cannot override game rules;
 - cannot change dice results;
 - cannot create items from nothing;
 - cannot know hidden information.
-

16. GAME OVER PHILOSOPHY

Failure is part of the story.

There is no save-scumming design philosophy.

The world remembers mistakes.

Consequences create stories.

17. VISUAL STYLE

Visual style:

- dark fantasy;
 - Gothic atmosphere;
 - medieval realism;
 - old parchment aesthetics;
 - wood and iron interfaces;
 - warm fire lighting;
 - cold wilderness lighting.
-

18. DEVELOPMENT PRIORITIES

Phase 1:

- frontend prototype;
- menus;
- world map;
- travel system;
- UI.

Phase 2:

- character systems;
- combat;
- inventory;
- progression.

Phase 3:

- AI NPCs;
- memory;
- dialogue.

Phase 4:

- world simulation;
- economy;
- factions;
- events.

19. PROJECT MISSION

Create a role-playing game where:

- the player can attempt anything;
- the world reacts logically;
- NPCs behave like living people;
- every playthrough creates unique stories.

This project aims to build a living fantasy world rather than a traditional RPG.
