STONE_SLEEP_SYSTEM.md

Mor'Talari Offline World Progression System

Version 0.1

1. CORE IDEA

The world does not stop when the player leaves.

When the player is absent, the character enters a mysterious state known as:

Stone Sleep

In ancient language, such people are called:

Mor'Talari

Meaning:

"Those who belong to two times."

2. LORE EXPLANATION

Mor'Talari are rare cursed people.

When Stone Sleep begins, they:

- fall unconscious;
- turn into stone;
- stop aging;
- stop bleeding;
- stop feeling pain;
- do not need food;
- do not need water.

No one knows the true cause.

3. PLAYER ABSENCE

When the player exits the game:

Player Character ↓ Stone Sleep ↓ World Simulation Continues

The world continues to change.

4. RETURN TO GAME

When the player returns:

- the character awakens;
 - time has passed;
 - the world state is updated;
 - NPCs remember the absence.
-

5. WORLD EVENTS DURING ABSENCE

During Stone Sleep, possible events include:

- wars;
 - deaths;
 - births;
 - diseases;
 - trade changes;
 - faction conflicts;
 - rumors;
 - economic shifts;
 - settlement changes.
-

6. RETURN SUMMARY

After awakening, the player receives a natural summary.

Example:

"You awaken from Stone Sleep.

Twenty-three days have passed.

During your absence:

- the northern mine was captured;
 - the village healer died;
 - a plague reached Stonebrook;
 - the Iron Legion searched for you."
-

7. NPC REACTIONS

NPCs react naturally.

Examples:

"You disappeared again."

"I thought you were dead."

"You promised to return in three days."

"While you slept, everything changed."

8. SOCIAL ATTITUDE

Different groups interpret Mor'Talari differently.

Peasants

Fear them.

Call them cursed.

Priests

Call them punished by gods.

Mages

Study them.

Criminals

Use them for dangerous tasks.

Cults

May worship them.

9. PROTECTION DURING STONE SLEEP

While turned to stone, the character:

- cannot be killed normally;
- cannot be poisoned;
- cannot starve;
- cannot bleed;
- cannot age.

However, the body may be:

- moved;
 - hidden;
 - stolen;
 - imprisoned;
 - worshipped;
 - guarded.
-

10. LOCATION ON RETURN

The player may awaken:

- where they slept;
- in a temple;
- in prison;
- in a cave;
- in a faction stronghold;

- in a stranger's home.

Depends on what happened.

11. ABUSE PREVENTION

Stone Sleep must not become an exploit.

The system may limit:

- time compression;
 - event severity;
 - world destruction;
 - permanent losses.
-

12. TIME COMPRESSION

Real absence does not always equal game time.

Example:

1 real hour:

- several game hours.

1 real day:

- 1-3 game days.

1 real week:

- 3-10 game days.

1 real month:

- 2-6 game weeks.
-

13. PROMISE CONSEQUENCES

If the player promised to return:

Example:

Promise: "I will return tomorrow."

Player absent: 10 game days.

NPC reaction: anger, fear, disappointment, betrayal.

14. QUEST CONSEQUENCES

Some quests continue without player.

Examples:

- missing person may die;
 - caravan may leave;
 - disease may spread;
 - war may begin.
-

15. SAFE QUEST TYPES

Some quests pause naturally.

Examples:

- ancient ruin;
 - personal mystery;
 - long-term research.
-

16. DANGEROUS QUEST TYPES

Some quests progress during absence.

Examples:

- plague;
- siege;
- kidnapping;
- famine;
- political coup.

17. WORLD SIMULATION INTEGRATION

Stone Sleep activates offline simulation.

Simulation updates:

- economy;
- factions;
- health;
- rumors;
- NPC schedules;
- wars.

18. AI-DM INTEGRATION

AI-DM generates awakening summary.

AI-DM must explain:

- what changed;
- why it changed;
- who remembers;
- what consequences exist.

19. NPC MEMORY INTEGRATION

NPCs remember:

- player absence;
- broken promises;
- strange awakening;
- fear of curse.

20. RUMOR INTEGRATION

Rumors may appear.

Examples:

"He turned to stone again."

"The cursed one sleeps under the chapel."

"Touching him brings bad luck."

21. CORE RULE

The player leaves the game.

The character sleeps.

The world continues.

And when the player returns, the world may no longer be the same.
